

PRODUCE CONSISTENT & HEAVIER QUALITY EGGS

Layer health is essential for producing *large, quality eggs* that are loaded with nutrition.

The maturity and nutritional uptake of a layer hen are key factors in the size of eggs they will produce. A growing layer will adjust their feed intake in order to meet energy requirements. As the energy content of a diet increases, feed intake decreases, and as energy is used more efficiently in the bird's system, egg quality and size improve.

Culbac® Animal Dry and Healthy Start® utilize a proprietary *Lactobacillus fermentation* product, amino acids, glycopeptides, immediately metabolizable vitamins and minerals, and functional cell components that are shown to promote a healthy intestinal microflora necessary for promoting optimum feed intake, rapid growth and overall performance of a bird.

Culbac® helps shift the balance of a bird's gut bacteria to a "good" gut bacteria and eliminates the bad. By giving a bird this healthy advantage, it leads to improved immunity, increased production rates and can also increase the weight, shell thickness and nutrient content of eggs they will produce.

ABIOTICS™, *not* Probiotics

PROVEN RESULTS:

- ✓ Helps convert feed into egg production
- ✓ Earlier achievement of large eggs produced in laying hens
- ✓ Number of eggs produced
- ✓ Lower mortality rates in flocks
- ✓ Reduced stress
